Research Support

Current

Principal Investigator (MPI with Julien Teitler, Columbia University, and Daniel Notterman, Princeton University), “Fragile Families: The Third Generation.” NICHD R01 HD103669-01A1. Award period: 8/19/2021 – 4/30/2026. \$4,023,512.

*This project—the FFG3 study—is collecting data on the 3rd generation of the Fragile Families and Child Wellbeing Study (FF), many of whom have already been born or are soon to be born. We will collect information on perinatal health, parenthood experiences, and characteristics of households and families into which the 3rd-generation children are born, as well as biological specimens from the 3rd-generation children and their parents who are not already part of the FF study. The data will facilitate novel and important analyses of intergenerational transmission of health, intergenerational relationships within families, and gene*environment effects on health.*

Co-Investigator, “The Minimum Wage and Maternal Reproductive Health in the U.S.” (MPIs: Mark McGovern and Slawa Rokicki). NICHD R01 1R01HD110482-01. Award period: 5/1/2023 – 2/28/2027. \$1,791,763. *This project is investigating the effects of minimum wage increases in the U.S. on maternal health outcomes, potential intermediary pathways through which minimum wage policies may affect maternal health, and health care costs associated with pregnancy, as well as disparities in these outcomes. Findings are providing policy-relevant insights on the potential for economic policies – such as raising the minimum wage – to address the current maternal health crisis in the U.S.*

Pending

Principal Investigator, “Welfare Reform and the Intergenerational Transmission of Disadvantage.” Submitted to NICHD. Proposed award period: 7/1/23 to 6/30/28. Impact score: 35. Percentile: 17. Submitted revised R01 application on July 5, 2023.

This project will investigate the effects of the dramatic restructuring of the cash assistance system for poor families in the U.S. in the 1990s on socioeconomic and health outcomes of the next generation of adults (through ~40 years old) and birth outcomes of their children. It explores potential heterogeneous effects by gender, age, and duration of exposure and by 1st-generation mothers' initial levels of human capital. The project will provide new and essential

evidence on how the time-limited and work-focused cash assistance system in the U.S. that has now been in place for decades has fostered or suppressed the intergenerational transmission of disadvantage—a key driver of rising income inequality—and will make pioneering contributions to the nascent evidence base on long-term effects of major social programs on children.
